

Marian Anderson Neighborhood Academy: Asbestos Hazard Report

The Philadelphia Regional Center for Children's Environmental Health has partnered with the Healthy Schools Initiative to analyze and report on public information regarding asbestos conditions in schools made available on the School District of Philadelphia's website.

This report is meant to communicate to parents, teachers, and staff the exposure risk at their school and help prioritize the removal of asbestos in high-risk exposure locations.

Our analysis is based on publicly available reports. We have not conducted inspections or verified the reports.

Key Findings:

- 64 teacher / student occupied spaces have asbestos containing material (ACM)
- 3 spaces had damaged ACM
- 1 space contained friable ACM
- **All damaged materials were scheduled to be abated**

Our Recommendations:

- The School District scheduled the abatement for all three damaged non-friable ACM identified during their latest inspection in Sep 2025 (see table 1).
- We recommend that the School District continue to monitor all ACM for damage.

What is asbestos?

Asbestos is a fibrous material that is resistant to heat, water, and corrosion.

See this link for a comprehensive list: <https://prcceh.upenn.edu/asbestos>

Asbestos was used in materials in schools, including:

- Ceiling Tiles
- Floor Tiles
- Pipe Insulation
- Cement
- Paint and Caulk
- Soundproofing
- Fireproofing
- Plaster Materials

What are the health effects of asbestos?

No immediate health impacts are expected from asbestos exposure in schools. However, breathing asbestos fibers in schools may increase the risk of developing cancer many years from now.

Children are very active, breathing more air while running and playing. Children take more breaths per minute than adults and are lower to the ground where asbestos fibers may settle. This puts them at an increased risk for asbestos exposure.

Are all asbestos containing materials of equal risk?

Some asbestos containing materials like ceiling and floor tiles have asbestos fibers imbedded in other materials. As long as they are not broken or damaged the asbestos fibers are not released into the air.

Some asbestos containing materials like insulation on pipe remains fibrous and can easily be released in the air when damaged.

How are damaged asbestos containing materials managed?

Asbestos can be removed. Sometimes damaged materials are managed in place by patching, encapsulating (using a specially formulated paint-like coating) or building an enclosure around damaged and/or accessible materials. All of these are forms of abatement.

The Environmental Protection Agency requires all remaining asbestos containing material to be inspected by the school district every six months. This is documented in an Asbestos Hazard Emergency Response Act Report (AHERA Report).

Important Terms

Get to know these terms to make the most out of this report.

Damaged Asbestos Containing Material (ACM) can release asbestos fibers into the air.

Friable Materials can be reduced to a powder by applying hand pressure. **DO NOT TOUCH!**

Non-Friable materials are not easily damaged.

Significantly damaged materials are more than 10% damaged.

Abated ACM means repaired, removed, or reduced risk of exposure.

Detailed Review for Marian Anderson Neighborhood Academy

This school has 66 spaces with asbestos containing materials. 64 of them are in teacher / student occupied spaces. The School District last inspected ACM in Sep 2025 and published the AHERA report in Sep 2025. Since then, the School District scheduled the abatement of all 3 damaged asbestos containing materials identified during this inspection. All damaged ACM identified were non-friable (see Table 2).

We recommend that the school district continue to monitor all ACM for damage. A list of all the ACM in the school and their damage/abatement schedule can be found in the tables at the end of this report. The Air Management Services Website does not confirm that the abatement scheduled in 2025 in response to the Sep 2025 AHERA report was completed.

Information Reviewed to Make this Report:

The 2025/26 AHERA report from the School District of Philadelphia, and asbestos abatement notifications from the Air Management Services Online Portal.

Not included in this report are planned repairs to damaged asbestos materials that have not been uploaded to the Air Management Services website or any updated after December 12, 2025. To see the most current information, scan these QR Codes. After scanning, search for your school.

School Districts of Philadelphia Asbestos Reports:

AHERA Reports are documents generated from EPA required asbestos inspections

download the app:

Disclaimer:

This report analyzes custodial and mechanical spaces like boiler rooms **only** when ACM is significantly damaged (damage > 10%).

Table 1: Friable Asbestos Containing Materials Identified

NOTE: Friable materials can be reduced to a powder by applying hand pressure.
Do not touch it! Damaged and significantly damaged friable materials readily release harmful asbestos fibers into the air.

Location	Material Name	Reported as Damaged or Significantly Damaged? (Blank = No)	Abatement scheduled since the inspection? (Blank = No)
Boiler Room	Pipe Fitting Insulation		
Boiler Room	Sectional Boilers		

Table 2: Non-Friable Asbestos Containing Materials Identified

NOTE: Significantly Damaged non-friable materials (damage \geq 10% of the material) can release harmful asbestos fibers into the air.

Location	Material Name	Reported as Damaged or Significantly Damaged? (Blank = No)	Abatement scheduled since the inspection? (Blank = No)
