Extreme Heat Safety During Pregnancy

Did you know?

It is harder for pregnant women to stay cool during hot days. Overheating, especially during the first trimester, can have health effects for the baby.

Action Plan

- ▶ **Keep Cool:**
 - ▶ On hot days, spend time in cool or air-conditioned areas at work, at home, and in your community.
 - ▶ Take lukewarm showers when you are feeling overheated.
 - ▶ Wear lightweight, light-colored clothing.
 - ▶ Avoid the sun during the hottest hours: 10am to 4pm. A wide-brimmed hat can protect you from the sun and keep you cooler.
- ▶ **Keep Hydrated:** Drinking lots of non-caffeinated fluids on hot days can help keep your body temperature down.
- ▶ **Check the air quality index:** air quality can be poor on extreme heat days. Visit airnow.gov to view today's air quality.
- ▶ **Recognize Heat-Related Illness:** Warm skin, headaches, dizziness, muscle cramps, and nausea.
 - ▶ Call your doctor right away if you've been in the heat and have these symptoms
