

# Prescriptions for Prevention

## Smoking

### Did you know?

Tobacco is the #1 preventable cause of death and disability in the United States.

## Action Plan

▶ To learn more about how smoking impacts health, click [this link](#) or scan the QR code:

- ▶ Quitting smoking is the most important thing you can do for your health and your family's health. Talk to your doctor about treatment options.
- ▶ If you are not a smoker, avoid cigarettes and e-cigarettes, which can be addicting. E-cigarettes in particular often contain much higher levels of nicotine which increase heart rate, blood pressure, among other effects.

▶ Philadelphia has the highest rate of smoking among the ten largest U.S. cities, which means that both adults and children exposed to secondhand smoke are at risk for the health effects of smoking.

▶ For more information about counseling and medications involved in the process of quitting and forming a recovery plan, click [this link](#) or scan the QR code:

▶ For specific strategies on how to resist tobacco cravings, click [this link](#) or scan the QR code:
